2 Pack Lock Set

Pinhead offers you the ideal solution to bicycle wheel theft, with their 2 pack lock set. The 2 Pack includes a front and rear wheel locking skewers, with each lock operated using a unique multi combination key, to ensure the security of your wheels at a fraction of their replacement cost.

3 Pack Lock Set

Pinhead offers you the ideal solution to bicycle part theft, with their 3 pack lock set. This includes a front and rear wheel locking skewers, with the addition of a seat lock. Each lock is operated via a unique multi combination key to ensure the security of your bicycle parts at a fraction of their replacement cost.

4 Pack Lock Set

Pinhead offers you the ideal solution to bicycle part theft with their 4 pack lock set. This includes a front and rear wheel locking skewers, seat lock, with the addition of a headset lock. Each lock is operated via a unique multi combination key to ensure the security of your bicycle parts at a fraction of their replacement cost.

Headset Lock Pack

Pinhead offers you the ideal solution to fork and stem theft with their headset lock. This includes the headset locking system, which secures your very expensive forks and stem assembly. As with all Pinhead products removal is via a unique multi combination key, which provides you with the peace of mind that your bike parts are secure.

Bubble Lock

Pinhead Bubble lock forms the backbone of a complete one-key locking system that secures your bicycle frame. Designed to work individually or in combination with the other Pinhead products, it provides bicycle riders with the peace of mind that their bike will be secure.

Ultimate Pack

Pinhead Ultimate pack includes the front and rear wheel locking skewers, seat lock, headset and the New Bubble lock. Each item can be easily secured utilising a unique multi combination key. This system really does provide bike enthusiasts with a comprehensive way of securing their entire bike and all its components. Enjoy complete bicycle security!

Protect your bike from theft

CATALOGUE

Defeat Bike Thieves! Secure Your Components

WITH THE ONE KEY BICYCLE LOCKING SYSTEM

Remember peace of mind goes a long way... no more
Removing your wheels or seat each time leave
your bike in a vulnerable area

PINHEAD SOLUTIONS

- Ultra tough, cold-forged steel
- 11,200 key combinations
- Easy installation and removal
- Lifetime key replacement

Ever locked up your bike with a U-lock and returned to find your wheels, seat, and handlebars stolen?

The Pinhead patented locking fastener system secures your individual bike components from theft. Unlike a conventional U-lock, which only secures your bike frame, the Pinhead component locking system locks your front wheel, rear wheel, seat, and forks to your bicycle frame.

Each Pinhead locking component replaces the standard parts that your bike is assembled with. Install the locking components, then forget they're there. Once installed, the Pinhead locking System remains on your bicycle when you ride, protecting your components from theft. If you do need to remove a component for bike maintenance, a unique locking key lets you easily and quickly remove any component.

Send thieves away empty handed

How the Locking System Works

The Pinhead locking system secures your individual bike components from theft. The Pinhead bicycle locking system locks your front wheel, rear wheel, seat, and handlebars to your bicycle frame.

Each Pinhead locking component replaces the standard fastener (pin assembly or hex nut) that your bike was built with. Install the locking components, then forget they're there. Once installed, the lightweight, unobtrusive Pinhead locking fasteners remain on your bicycle when you ride, protecting your components from theft. If you do need to remove a component for bike maintenance, your unique locking key lets you easily and quickly remove any component.

No more removing your wheels or seat each time you leave your bike in a vulnerable area! Pinhead's patented locking fastener devices secure your components from theft.

Suitable for all types of bikes

Pinhead bicycle component locks are convenient, inexpensive, and easy to use. Pinhead locks can be installed on all bicycles, including those with no wheel release system and those with existing quick release systems. The locking components are universal, functional, compact, durable, lightweight, and cost-efficient.

The Pinhead locking system is safer than quick-release systems, which can accidentally release if the release mechanism is bumped (for example, if a child is riding near low bushes) or if someone has tried to remove the wheel and failed.

FRONT WHEEL LOCK

The front wheel locking skewer prevents removal and theft of the front wheel unless you have your unique Pinhead key.

REAR WHEEL LOCK

The rear wheel locking skewer which prevents removal and theft of the rear wheel unless you have your unique Pinhead key.

SEAT LOCK

Prevents removal and theft of the seat assembly by unwanted thieves unless you have your unique Pinhead key.

HEADSET LOCK

The Headset Lock, which offers you the ideal solution to fork and stem theft which secures your very expensive forks and stem assembly setup.

THE ULTIMATE ANTI-THEFT TECHNOLOGY FOR BIKE COMPONENTS
